

Age range at Udacity

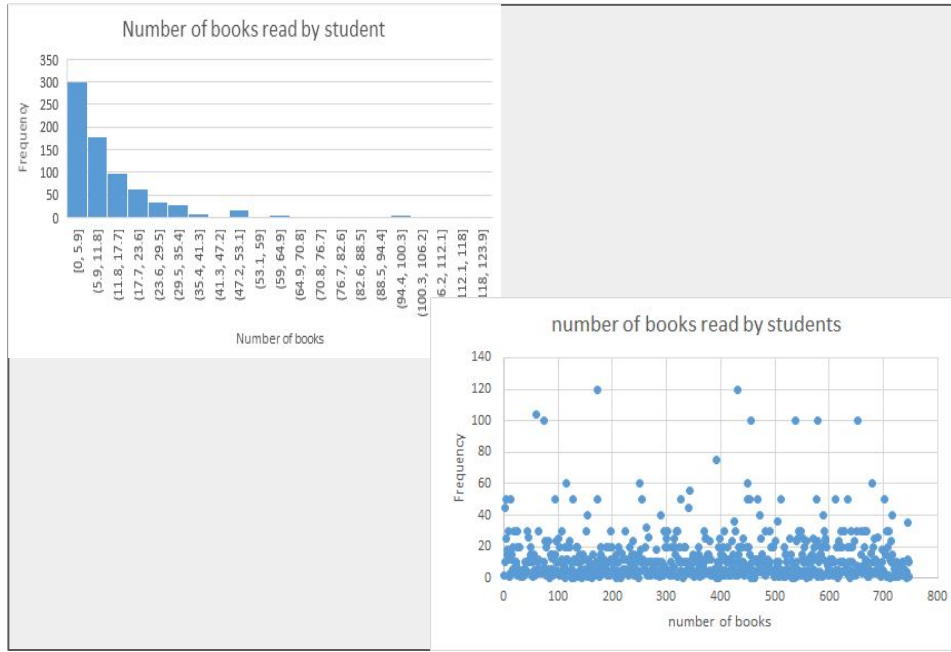

What age range of student are studying the most at Udacity?

From the chart we can see that there are more student within the range of 36 and 39. There is an age of 80 we cant conclude if it an incorrect input or not.

However the mean age is 32 and the SD is 9 the spread of the age is very small. Most of the student age are very close to the mean. The age range is 61.

Average number of books read by student

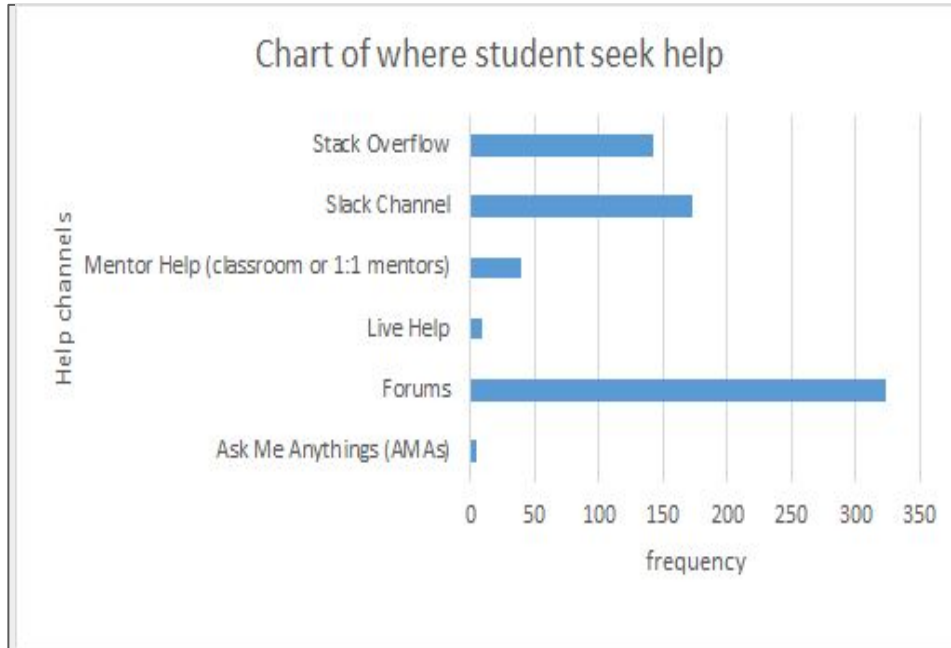

Average number of books read by the student is 13 and the mode is 10 which are very close.

From my analysis there are over 200 students who read books more than the average books and over 500 student who read less than the average books.

The distribution is left skewed, we have more student who read less than the mean.

Most helpful platform

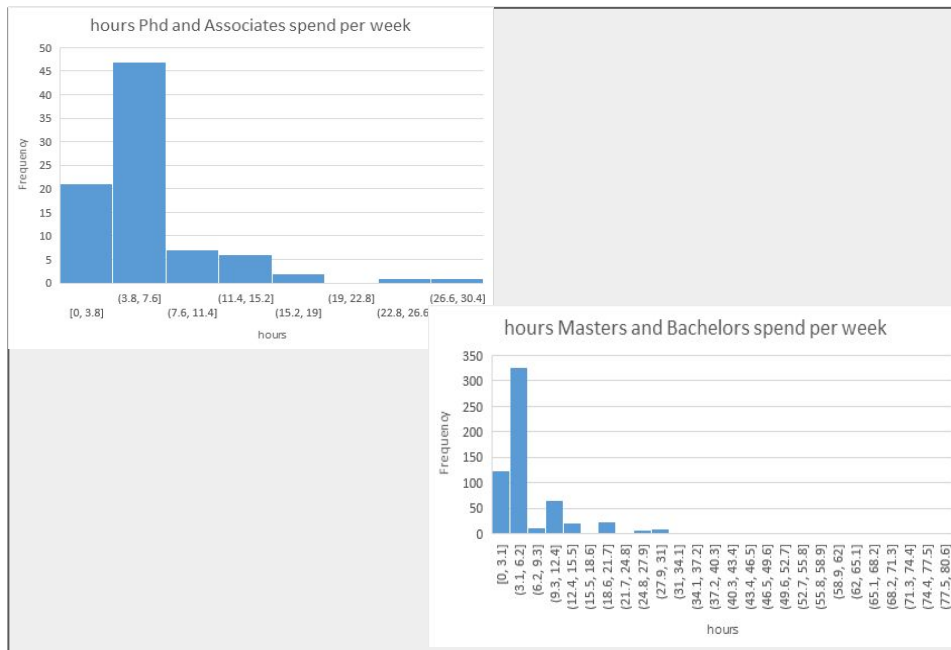

This chart shows the most used platform for help.

The forums is the most used followed by the slack channel then the stack overflow.

The mentor help and the live help platform are the most unused platform.

The mode = forums.

Study hours spent per week by education

Study hours between Phd and Associates vs Masters and Bachelors.

The mean, standard deviation and mode for each group appears to be similar. We can also see that most of them sleep between 3 - 6 hours.

The standard deviation of the groups are very small which show a low spread out from the mean.

The two charts are also right skewed.
